Three-phase stepper motors are useful in applications that require very-high resolution (micro-stepping) as well as minimal noise and vibration. This TIDA-01362 design achieves all of these requirements by driving a three-phase stepper motor using Texas Instruments DRV8313 brushless DC (BLDC) motor

HB stepper motor, indicating mixing the advantages of PM and VR, is divided into 2-phase, 3-phase and 5-phase. The stepping angle of 2-phase is generally  $1.8^\circ$ , that of 3-phase  $1.2^\circ$  and that of 5-phase is  $0.72^\circ$ . It is mostly widely applied.

In a three phase motor application, only three half bridges and a single sense resistor are required to drive a stepper motor. One or both motor drivers can be configured for driving a three phase motor. It is important to match the external wiring before switching on this option of the power driver stage.
