Systems

perspective of load balancing, WCF applications that communicate using the BasicHttpBinding are no different than other common types of HTTP network traffic (static HTML content, ASP.NET pages, or ASMX Web Services). WCF channels that use this binding are inherently stateless, and terminate their connections when the channel closes.

2 Load Balancing Framework Overview

The primary goal of our framework is to provide an abstract method for load balancing that is applicable to a wide range of workloads and systems, as well as allowing for many different policies and strategies.

Systems

I have a requirement to use IIS to configure load balancing. Then you really should get a clearer requirement before moving on, instead of asking for specific guidance. When people say load balancing IIS, they either use a hardware load balancer (like F5/A10), or use Windows network load balancing services, or use IIS ARR.
