The ADIRS computes aircraft position, speed, altitude, attitude, and air data for the displays, flight management guidance system, flight controls, engine controls, and other systems. ADIRU - Three identical air data/inertial reference units (ADIRUs) are installed in the aircraft.

Air Data Inertial Reference System | Description | Section ...

An Air Data Inertial Reference Unit (ADIRU) is a key component of the integrated Air Data Inertial Reference System (ADIRS), which supplies air data (airspeed, angle of attack and altitude) and inertial reference (position and attitude) information to the pilots' electronic flight instrument system displays as well as other systems on the aircraft such as the engines, autopilot, aircraft flight control system and landing gear systems.

The ADIRU consists of a Power Supply, an Air Data Module and the Inertial Reference Unit which performs air, and inertia related calculations. Operating power for the L ADIRU comes from the 115/28 VAC standby bus where the R ADIRU from 115VAC/28VAC XFR bus 2. Backup power for both ADIRU's comes from the 28 VDC Switched Hot Battery bus.
