Young animals love nothing more than play. But science is now revealing the astonishing benefits animals gain from it. This series uncovers the secrets behind their games.

### **BBC Two - Animals at Play**

Play behavior can vary so much; animals need to be able to tell when something is play rather than real aggression or a mating display. For example, chimpanzees have something called a "play face," and dogs do something called a "play bow" — rump high in the air with forelimbs pressed into the ground."

At this time, there is no evidence that animals play a significant role in spreading the virus that causes COVID-19. Based on the limited information available to date, the risk of animals spreading COVID-19 to people is considered to be low. More studies are needed to understand if and how different animals could be affected by COVID-19.
