Update: Read about optimizing the space complexity of the dynamic programming solution in my follow-up article here. From Wikipedia, we see that there are a few variations of the Knapsack Problem...

## **How to solve the Knapsack Problem with dynamic programming ...**

Dynamic Programming is a method for solving a complex problem by breaking it down into a collection of simpler subproblems, solving each of those subproblems just once, and storing their solutions using a memory-based data structure (array, map, etc). Each of the subproblem solutions is indexed in some way, typically based on the values of its input parameters, so as to facilitate its lookup.
