Solve real world problems logically using appropriate set, function, and relation models and interpret the associated operations and terminologies in context. Analyze and synthesize the real world problems using discrete mathematics. Course Contents Unit I Set Theory and Logic 09 Hours

Syllabus of June 2016)

OOP allows decomposition of a problem into a number of entities called objects and then builds data and function around these objects. The organization of data and function in object-oriented programs is shown in fig.1.3. The data of an object can be accessed only by the function associated with that object.
