TURBOCHARGER AND SUPERCHARGER - Nathi

A Supercharger is a device, which increases the pressure of the air-fuel mixture from the carburettor before it enters the engine. The process of supplying the air-fuel mixture to the engine above the atmospheric pressure is called supercharging. In an un-supercharged engine, the cylinder draws the mixture equal to its displacement volume.

Since superchargers eat up gas, be sure to check fuel levels. A supercharger belt has a life expectancy of 80,000-110,000 km, and should be replaced before reaching this point. Oil should be

Special Maintenance Considerations for Supercharged Cars

Supercharging increases power output of an engine without increasing fuel consumption. Certain amount of power generated by the engine goes for the compression of air but overall power output is more. The engine which is to be used with a supercharger is made to withstand higher forces due to supercharging.

In other words it is the process of improving the breathing ability of the engine. An supercharged engine gives better power for the same amount of fuel that a non-supercharged engine does.

What is supercharging in IC engine? - Quora

The source of the power for the supercharger is in a belt connected directly to the engine. A supercharger will compress air of the atmospheric pressure, and create the boost by forcing air into the engine. The supercharger can add as much as 46% more horsepower because the increased air will allow more fuel to be added to the combustion charge.

Supercharging of IC Engines - Mechanical Engineering

In contrast to turbochargers, superchargers are mechanically driven by the engine. Belts, chains, shafts, and gears are common methods of powering a supercharger, placing a mechanical load on the engine. For example, on the single-stage single-speed supercharged Rolls-Royce Merlin engine, the supercharger uses about 150 hp (110 kW).

Turbocharger - Wikipedia

Supercharging is preferred in ci engine because it leads to decrease delay period (time between fuel injection and combustion), therefore decrease detonation where as in si engine it increases compression ratio, increases detonation. 1.4k views · View 7 Upvoters
