This article deals with the application of the cybernetic decision making model on the educational field. The author deals with the challenge of decision-making in education, an area that characterized by great complexity and dynamics as illustrated in recent studies. This article will present the cybernetic model, which specializes in explaining complex decision situations that require improvisation and complex decisions in education as an option for implementation.

How to Apply the Cybernetic Decision Making Model in ...

The essential goal of the broad field of cybernetics is to understand and define the functions and processes of systems that have goals and that participate in circular, causal chains that move from action to sensing to comparison with desired goal, and again to action.

Cybernetics - Wikipedia

Management cybernetics is the application of cybernetics to management and organizations. "Management cybernetics" was first introduced by Stafford Beer in the late 1950s. Beer developed the theory through a combination of practical applications and a series of influential books.

Management cybernetics - Wikipedia

The Cybernetic Theory of Decision: New Dimensions of Political Analysis (Princeton University Press, 1974, 2003) Preface to the Second Paperback Edition This book was the result of emigration across disciplinary boundaries.

The Cybernetic Theory of Decision: New Dimensions of ...

Cybernetics theories tend to rest on four basic pillars: circularity, variety, process and observation. Circularity occurs in its earliest theories of circular causation or feedback, later in theories of recursion and of iteration in computing and now involving self-reference in cognitive organization and in autonomous systems of production.

Systems Theory/Cybernetics - Wikibooks, open books for an ...

The Cybernetic Theory of Decision-Making Herbert Simon (1985) claimed that cognitive models assume that "decision makers have limited information processing capabilities. Instead of objectively searching all information for the best outcome, decision makers will select an alternative that is acceptable" or "good enough."

Decision Making Theories in Foreign Policy Analysis ...

Cybernetics is the interdisciplinary study of the structure of complex systems, especially communication processes, control mechanisms and feedback principles. Cybernetics is closely related to control theory and systems theory.
